

Good to go

To locally run our web service we have to tell the database the modifications we just have made, by doing ->

```
python manage.py makemigrations
```

```
python manage.py migrate
```

To run the server ->

```
python manage.py runserver
```

Here we go! You just got your web service running local

Obs: you must add at least one django and one python pdf file in:
<http://127.0.0.1:8000/admin>, for the index page!
