Welcome to the Django

Installing Django -> pip install Django

Creating a Django Project -> django-admin startproject djangofromscratch

Change Directory -> cd djangofromscratch

In the current directory, we have a python script (manage.py) and the Project directory (djangofromscratch) -> manage.py is a utility that let us to interact with the Project in various ways; we are going to user this script to run the localhost server, by the command: python manage.py runserver, for example

Migrate Database -> we need to migrate the database; db.sqlite3 is the default database for django, we can change the database settings in djangofromscratch/settings.py. The command to migrate the database is: python manage.py migrate

Creating a Super User -> for each database, we need to create a super user, that will manage the files, the others users and groups. The command line for this is: python manage.py createsuperuser
