Templates

This webservice priority is to teach you how to start a Django web application and to deploy it to the cloud

You need to know a little bit of: html, bootstrap and css to build the layout of the site

Here is a great documentation site, to learn those languages ->

http://www.w3schools.com/

And here is this Project path in Git Hub, in case you want to see ours templates ->

https://github.com/TarikBauerVentura/djangofromscratch.git

What we are going to do now is ->

In the lessons/templates we are going to create ours templates, and in static we are going to create our style.css and images
